1 QUESTION No. 6.17

A person plays a game of tossing a coin thrice. For each head, he is given Rs 2 by the organiser of the game and for each tail, he has to give Rs 1.50 to the organiser. Let X denote the amount gained or lost by the person. Show that X is a random variable and exhibit it as a function on the sample space of the experiment.

2 SOLUTION

Let X_1, X_2, X_3 be the three tosses of the coin and X be the total amount such that

$$X = X_1 + X_2 + X_3 \quad (2.0.1)$$

where

$$X_i = \{2, -1.5\} \quad (2.0.2)$$

Assuming a fair coin, the probability mass function of X is given by

$$\Pr(r, n, p) = \frac{n!}{r!(n-r)!} p^r (1-p)^{n-r} \quad (2.0.3)$$

where

$$n = 3, p = \frac{1}{2}, r = 0, 1, 2, 3 \quad (2.0.4)$$

| | | | | |
|----------|---------------|---------------|---------------|---------------|
| r | 0 | 1 | 2 | 3 |
| $\Pr(r)$ | $\frac{1}{8}$ | $\frac{3}{8}$ | $\frac{3}{8}$ | $\frac{1}{8}$ |
